

5.5 Exercises

1–8 Find the average value of the function on the given interval.

- $f(x) = 4x - x^2$, $[0, 4]$
- $f(x) = \sin 4x$, $[-\pi, \pi]$
- $g(x) = \sqrt[3]{x}$, $[1, 8]$
- $g(t) = \frac{t}{\sqrt{3+t^2}}$, $[1, 3]$
- $f(t) = t^2(1+t^3)^4$, $[0, 2]$
- $f(\theta) = \sec^2(\theta/2)$, $[0, \pi/2]$
- $h(x) = \cos^4 x \sin x$, $[0, \pi]$
- $h(r) = 3/(1+r^2)$, $[1, 6]$

9–12

- Find the average value of f on the given interval.
- Find c such that $f_{\text{ave}} = f(c)$.
- Sketch the graph of f and a rectangle whose area is the same as the area under the graph of f .

9. $f(x) = (x-3)^2$, $[2, 5]$

10. $f(x) = \sqrt{x}$, $[0, 4]$

 11. $f(x) = 2 \sin x - \sin 2x$, $[0, \pi]$

 12. $f(x) = 2x/(1+x^2)^2$, $[0, 2]$

13. If f is continuous and $\int_1^3 f(x) dx = 8$, show that f takes on the value 4 at least once on the interval $[1, 3]$.

14. Find the numbers b such that the average value of $f(x) = 2 + 6x - 3x^2$ on the interval $[0, b]$ is equal to 3.

15. Find the average value of f on $[0, 8]$.

 Graphing calculator or computer required

1. Homework Hints available at stewartcalculus.com

376 CHAPTER 5 APPLICATIONS OF INTEGRATION

16. The velocity graph of an accelerating car is shown.

- Use the Midpoint rule to estimate the average velocity of the car during the first 12 seconds.
- At what time was the instantaneous velocity equal to the average velocity?

17. In a certain city the temperature (in °F) t hours after 9 AM was modeled by the function

$$T(t) = 50 + 14 \sin \frac{\pi t}{12}$$

Find the average temperature during the period from 9 AM to 9 PM.

18. The velocity v of blood that flows in a blood vessel with radius R and length l at a distance r from the central axis is

$$v(r) = \frac{P}{4\eta l} (R^2 - r^2)$$

where P is the pressure difference between the ends of the vessel and η is the viscosity of the blood (see Example 7 in Section 2.7). Find the average velocity (with respect to r) over the interval $0 \leq r \leq R$. Compare the average velocity with the maximum velocity.

19. The linear density in a rod 8 m long is $12/\sqrt{x+1}$ kg/m, where x is measured in meters from one end of the rod. Find the average density of the rod.

20. If a freely falling body starts from rest, then its displacement is given by $s = \frac{1}{2}gt^2$. Let the velocity after a time T be v_T . Show that if we compute the average of the velocities with respect to t we get $v_{\text{ave}} = \frac{1}{2}v_T$, but if we compute the average of the velocities with respect to s we get $v_{\text{ave}} = \frac{2}{3}v_T$.

21. Use the result of Exercise 57 in Section 4.5 to compute the average volume of inhaled air in the lungs in one respiratory cycle.

22. Use the diagram to show that if f is concave upward on $[a, b]$, then

$$f_{\text{ave}} > f\left(\frac{a+b}{2}\right)$$

23. Prove the Mean Value Theorem for Integrals by applying the Mean Value Theorem for derivatives (see Section 3.2) to the function $F(x) = \int_a^x f(t) dt$.

24. If $f_{\text{ave}}[a, b]$ denotes the average value of f on the interval $[a, b]$ and $a < c < b$, show that

$$f_{\text{ave}}[a, b] = \frac{c-a}{b-a} f_{\text{ave}}[a, c] + \frac{b-c}{b-a} f_{\text{ave}}[c, b]$$
